Computers and Information

ALLEGHENY
COLLEGE

- In this class, you will learn how to use machines to understand *trends* in data.
- (Making decisions by data)

Analytics in Action

- The Jeopardy! Challenge of February 2011
- IBM's Watson beat the show's greatest champions: Ken Jennings and Brad Rutter.

Machines, Data and Information

WATSON PRESIDENT

Is Watson magic??

<http://watson2016.com/>
(The Electronic Frontier Foundation)

Surrounded by DATA!

- We live in the “Information age”
- Actually, we live in the “Data age” since there is more data available than information
- Data != Information

Surrounded by DATA!

- It is cheap (and free or even lucrative) for businesses to collect data concerning:
 - in e-commerce,
 - customer behaviors,
 - purchase interests,
 - health and medical data.

We Voluntarily Give Away Our Data

Our Phones Create Data

- Smart phones constantly monitor us and keep data.
- **Q: How does the iPhone decide whether we are actually getting enough sleep?**
- **Who keeps the data?**

ALLEGHENY
COLLEGE

And So, Data is Increasing

 **65 billion**

Location-tagged payments
made in the U.S. annually

154 billion

E-mails sent per day

 **87%**

U.S. adults whose location is
known via their mobile phone

Digital Information Created Each Year, Globally

2,000 BILLION GIGABYTES

2,000%

Expected increase in
global data by 2020

**III
Megabytes**

Video and photos stored
by Facebook, per user

75%

Percentage of all digital
data created by consumers

Data, Data, Data, Data!

- How much data is there?
 - <https://www.forbes.com/sites/bernardmarr/2018/05/21/how-much-data-do-we-create-every-day-the-mind-blowing-stats-everyone-should-read/#76dc5de060ba>
 - <https://youtu.be/VLAnBI2B4OY>

Sources of Data

FACEBOOK MONTHLY ACTIVE USERS
JUNE 2017

Linked In

twitter fast facts

MONTHLY USERS

Data of User Ages

Age distribution by social networking site platform

% of social networking site users on each site who are in each age group. For instance, 29% of MySpace users are 18-22 years old.

Source: Pew Research Center's Internet & American Life Social Network Site survey conducted on landline and cell phone between October 20-November 28, 2010. N for full sample is 2,255 and margin of error is +/- 2.3 percentage points. N for social network site and Twitter users is 975 and margin of error is +/- 3.5 percentage points.

By the way: These last slides visually describe trends ...

- Graphics have informed us:
 - Which apps are popular
 - Number of people in age groups for social networking sites
 - How much data is created each year, in relation to other years
 - Twitter “fast-facts”
 - Monthly users of services
 - Increases in Linked-In membership
- **How did we learn this information to make these previous visualizations?**

***Seriously, where did this
information come from???***

- Algorithms processed seemingly unconnected data to filter out unimportant material.

How Do We Know?

- The previous graphs came to us via raw Big Data from sites like Google, Facebook, Twitter and others.
- **Raw Data:** Seemingly meaningless clutter-like gibberish in which patterns are masked.

Big data is high-volume, high-velocity and high-variety information assets that demand cost-effective, innovative forms of information processing for enhanced insight and decision making.

-- Gartner

So, It Looks Like We Need **Data** to *Live Intelligently*

- Making *smart* (?) decisions:
 - *Can we make reliable decisions without **data**?*
 - *Is the quality of our society diminished by bad or missing **data**?*
 - *How can we improve commerce, trade without knowledge from **data**?*
 - *How can we make better health decisions without knowledge from **data**?*
- You could give surveys to gather ideas from people but few are likely to respond...

***But, when was the last time
YOU took a survey?***

Policy Creation by Analytics

Thus, Much Interest in Data Analytics

- The present and future are information-driven
- Some of the decisions made after studying trends in a population
 - **Commerce:** what have customers already bought?
 - **Media:** What themes of films, music make money?
 - **Industry:** What products should we make to build, satisfy a market? Which market?
 - **Life Sciences and Medicine:** Reasons for sickness? Bad types of foods? Exposures to toxins?

Your Career Could Be Here!

- *“Big Data & Analytics Is The Most Wanted Expertise By 75% Of IoT (Internet of Things) Providers”*
 - <https://www.forbes.com/sites/louiscolumbus/2017/08/21/big-data-analytics-is-the-most-wanted-expertise-by-75-of-iot-providers/#52082a4e5188>

 4.3★

Prodigy Game
Game Data Analyst
Oakville

Bonus Points For:

- Degree in Engineering, Computer Science, Stats, Mathematics
- Demonstrated ability to solve hard mathematical, algorithmic, and statistical problems
- Expertise in advanced game analytics - user segmentation, player modelling
- Knowledge of Python/R languages
- Experience working with cloud platforms like AWS (Redshift, Athena, S3)
- Experience working with A/B testing and experimentation
- Significant accomplishments that required both technical and strategic capabilities, such as research projects, open source software contributions, and entrepreneurship

Why W

 3.9★

ADURO
Data Analyst
Redmond, WA
\$46K-\$78K (Glassdoor Est.) ⓘ

- Demonstrated ability to maintain absolute confidentiality
- Proficiency in BI Tools (Sisense, Tableau, PowerPivot, DOMO or other comparable tools)
- Aptitude with SQL, R, and other languages supporting data analysis
- Experience with C based object-oriented programming
- Experience working within a large reporting Data Warehouse
- Experience working with web and application analytics tools (Firebase, Google Analytics)
- Experience using analytics to support product development
- Familiar with source-control repositories and associated practices (Git, GitHub)
- Proven attention to detail and accuracy

- **An Analytics Expert**
 - To apply data analysis skills to help development teams better understand users by applying analytics
 - Find and integrate data from multiple sources to provide analysis
 - Develop tools & methods to ensure data accuracy
 - Collaborate with Data & Analytics team members
 - R skills
